

Pregnancy turns the circulation pro-thrombotic

Clotting is dialled up to limit blood loss — the same shift clots the brain

Hemostatic balance

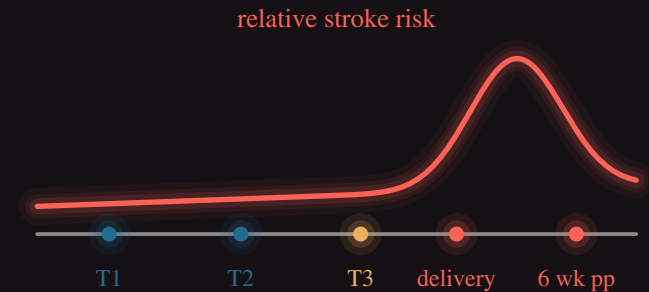

hypercoagulability · volume shifts · venous stasis

Stroke in pregnancy

16–41

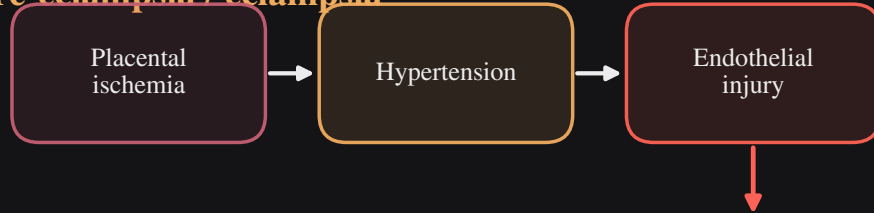

ischemic strokes
per 100,000

Highest risk: late 3rd trimester → first 6 weeks postpartum

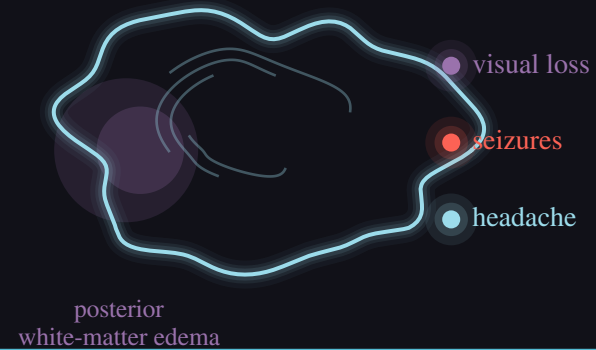

Peripartum neurovascular syndromes

Pre-eclampsia / eclampsia

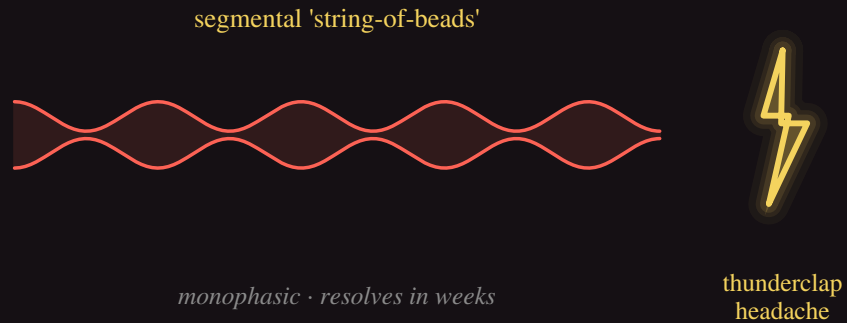

Brain: seizures · stroke · hemorrhage · PRES

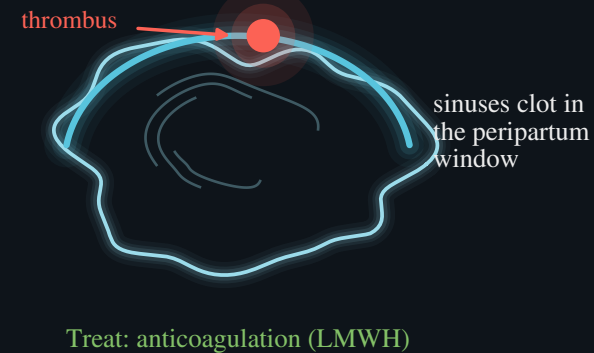

PRES

RCVS

Cerebral venous thrombosis

Hormones & lifelong risk

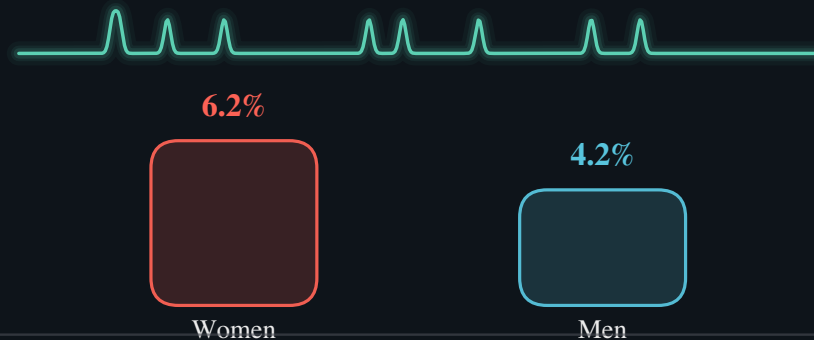

Migraine with aura

aura × estrogen-containing contraception
= absolute contraindication to CHC

Atrial fibrillation

annual stroke risk, nonvalvular AF

Pregnancy = stress test

Gest. diabetes	→ ~50% diabetes / 5 yr
Gest. hypertension	→ 2–4× later HTN
Pre-eclampsia	→ ≥2× stroke later

Lupus & antiphospholipid antibodies
